Initial Please

I accept the estimate

This is only an estimate of charges. I accept that a good faith effort has been made to anticipate costs of treatment. However, I understand that medical conditions may change unexpectedly resulting in changes in ultimate charges and costs. I am the owner's agent for the pet named above and I accept full financial responsibility. The doctor has explained the medical conditions affecting my pet and the proposed regimen of treatment. I authorize the doctor to proceed as described. I understand that I will be responsible for charges exceeding this estimate up to 25% of the total above. I agree to retrieve my pet prior to the agreed upon time to avoid accruing late fees.

Initial Please

I decline the estimate

Consent 2 of 5 for Geisha

Initial Please

If my pet should suffer cardiac arrest; I request full resuscitation efforts with the understanding additional financial responsibility will result even if CPR measures are unsuccessful, resulting in death.

*A recent study by Tufts Veterinary School (ACVIM 2008) evaluated 62 dogs and cats who experienced cardiac or respiratory arrest indicates although 67% were restored to spontaneous circulation (ie. breathing and normal heart rhythm) **only 7% were discharged from the hospital** (5 dogs and 0 cats).*

Initial Please

(DNR) Please do not resuscitate my pet in the event of cardiac arrest.

Consent 3 of 5 for Geisha

"I understand that this estimate is for services performed today through discharge from this visit. Follow up care is not included in this estimate and will be billed at the time services are performed. If you need an estimate for follow-up care, please let a technician know and we will be happy to provide you with one."

Off-label Use:

"Off-label" refers to the use of medication in a manner that is not specifically approved by the FDA. This is frequently done in veterinary medicine, since many drugs have not undergone clinical trials or pharmacokinetic studies in animals in order to be approved by the FDA. Clinical trials are very expensive, thus many drugs are used off-label.

Diagnostics and surgical procedures: Fracture repair of the jaw

Your pet will undergo repair of the discussed fracture. Though most animals do relatively well following fracture repair, complications can arise. Potential complications that may incur additional cost, result in unexpected outcome, and or prolong hospital stay include the following:

1. Anesthetic complications including allergic reaction, death, thromboembolism, esophagitis and aspiration pneumonia
2. Airway swelling that can result in the need for airway bypass or oxygen therapy
3. Infection of the bone or joint, the chance of this is higher for fractures of the jaw
4. Incisional complications including infection, seroma, and suture reaction
5. Dehiscence (falling apart) of wounds/incisions within the mouth, which is more common than other sites
6. Implant failure which may or may not require further surgery--pin loosening is not uncommon
7. Bleeding which is usually minimal
8. Delayed or nonunion of the fracture
9. Jaw malalignment which may be visible and may require tooth removal in the future
10. There may be a need for a long term feeding tube with management
11. Need for implant removal in the future

Please note that though these are the most commonly seen complications with this particular procedure other less commonly or unforeseeable complications may arise.

I, Sheena Sledge am aware of the possible complications and understand other complications not mentioned above may occur. I consent to surgery and accept the risks involved.
